

```

function varargout = pv_loss_module_v1(varargin)
% Code Compiled by Roshan R Rao

% PV_LOSS_MODULE_V1 MATLAB code for pv_loss_module_v1.fig
% PV_LOSS_MODULE_V1, by itself, creates a new PV_LOSS_MODULE_V1 or raises the existing
% singleton*.
%
% H = PV_LOSS_MODULE_V1 returns the handle to a new PV_LOSS_MODULE_V1 or the handle to
% the existing singleton*.
%
% PV_LOSS_MODULE_V1('CALLBACK',hObject,eventData,handles,...) calls the local
% function named CALLBACK in PV_LOSS_MODULE_V1.M with the given input arguments.
%
% PV_LOSS_MODULE_V1('Property','Value',...) creates a new PV_LOSS_MODULE_V1 or raises the
% existing singleton*. Starting from the left, property value pairs are
% applied to the GUI before pv_loss_module_v1_OpeningFcn gets called. An
% unrecognized property name or invalid value makes property application
% stop. All inputs are passed to pv_loss_module_v1_OpeningFcn via varargin.
%
% *See GUI Options on GUIDE's Tools menu. Choose "GUI allows only one
% instance to run (singleton)".
%
% See also: GUIDE, GUIDATA, GUIHANDLES

% Edit the above text to modify the response to help pv_loss_module_v1
